TBG Magnum Toppers

Introducing TBG's Magnum Topper Range.

A TBG original design with a focus on a sleek modern look, as well as the ease of use and serviceability utilizing our latest lighting technology. Specifically designed as an EGM/VLT component that interacts with the machines to enhance the attraction.

By using TBG's Edge-Lit-Panel (ELP) technologies, we have been able to create the thinnest and lightest topper in our range and also featuring a halo displaying vivid RGB chase light colours

The use of ELPs allows customizations in any size and shape. Apart from the standard versions, additional custom shapes and sizes can be designed with a short lead-time, helping customers meet time-to-market challenges.

Fitting artworks has never been so easy. Artwork on the Magnum Toppers is placed directly over the evenly illuminated ELP and held securely together by magnets, no tools required.

Mechanical fittings have been designed to fit to EGM/VLTs, powered directly from the machines power supply/distribution and lighting functions made to interact with machine features.

TBG's Magnum Topper features:

- The thinnest form factor of all toppers.
- Magnetic artwork placement, for easy and fast tool-less artwork replacement.
- Halo effect surround RGB lighting, with a multitude of light sequences available.
